Dear Hiring Manager,

I am excited to apply for the Software Engineer position. I am a software engineer at Microsoft with 4 years of experience building, testing, and supporting enterprise web applications for Dynamics 365 Contact Center. My experience spans React, TypeScript, backend service integrations, REST-based workflows, production debugging, and automated testing, with a focus on delivering reliable software for customer-facing enterprise products.

At Microsoft, I served as the primary frontend engineer for customer communication workflow features including Direct Transfer and Consult to Queue, which supported agent transfers and queue-based collaboration across global enterprise tenants. I built React and TypeScript applications integrated with backend services, contributed to technical design and implementation, supported accessibility reviews and staged releases, and helped drive adoption across customers including T-Mobile, HP, Xiaomi, and Lenovo. This work required close collaboration with product managers, designers, backend engineers, and partner teams to deliver maintainable, production-ready software.

More recently, I have worked on Intent Assist, an AI-assisted CRM platform that provides contextual response suggestions to customer service agents. As a full-stack engineer on the project, I have contributed to response suggestion workflows, third-party CRM integrations, user experience improvements, error handling for voice scenarios, and automated validation using Playwright MCP. I also investigate production issues using telemetry, KQL, and live debugging, which has strengthened my ability to understand system behavior across frontend, backend, and integration layers.

I am motivated by opportunities to build reliable full-stack software, solve practical technical problems, and contribute across the software development lifecycle. I would welcome the opportunity to bring my experience in React, TypeScript, backend integrations, production debugging, automated testing, and cross-functional collaboration to your team. Thank you for your time and consideration.

Sincerely,
Allen Zhou
